LoanMate AI · Live Demo Script

What to say to the bot during the demo, what it should answer, and what each line proves.

Before you start

- Start three things: the backend (`uvicorn backend.main:app --port 8000`), the voice worker (`python -m backend.voice_agent.realtime_agent dev`) and the web app (`npm run dev` in `frontend/web`). Open **http://localhost:3000**.
- Allow the microphone when the browser asks. Use a headset or a quiet room — speaker echo makes the bot interrupt itself.
- Pick the **customer** from the dropdown, then the **language** (English, Hindi or Hinglish). For a bank-initiated call, pick the **purpose** (Auto picks the right one for the customer).
- Let the bot finish each answer before the next question — unless you are deliberately showing interruption.

Which customer to pick

Customer	Their account	Best for
Rajesh Kumar (CUST001)	Home loan: EMI ₹31,500, due 5 September, ₹28,70,000 outstanding, 168 months left. Also a personal loan.	Account questions, prepayment, EMI reminder call
Sanya Malik (CUST002)	Car loan	Top-up offer on a car loan
Maanasvee Khetan (CUST003)	Home loan + education loan	Education-loan schemes and tax questions
Reya Oberoi (CUST004)	Personal loan, **KYC pending**	Auto → KYC update call
Mohammed Irfan (CUST005)	**Overdue** business loan	Auto → overdue follow-up call

Suggested 5-minute flow

1. Rajesh, English, **Call LoanMate**: “What’s my EMI?”
2. Switch to Hindi, call again: “Meri EMI kitni hai?” — the whole reply comes back in Hindi.
3. “If I prepay two lakh, what happens to my EMI and is there a charge?” — maths and an RBI rule in one answer.
4. “What’s the weather in Mumbai?” — it says it doesn’t know instead of inventing an answer.
5. “I need a no-dues certificate.” — a service request with a reference number.
6. Mohammed, Auto, **Bank is Calling You** → Accept → “Yes, speaking.” → “I can pay on the 25th.”
7. Open **http://localhost:8000/api/calls/records** to show everything the calls recorded.

PART 1 · CALL LOANMATE · RAJESH

Real account data, not guesses

Say this	Expect	Shows
"What's my EMI?"	₹31,500	Numbers come from a tool reading the account
"When is my next payment due?"	5 September	Same — never guessed by the AI
"How much do I still owe?"	₹28,70,000 outstanding	Balance lookup
"If I prepay two lakh, what happens to my EMI?"	New balance ₹26,70,000; EMI falls by about ₹2,040 (to ₹27,232)	Live calculation tool
"Compare 10 years versus 15 years."	EMI and total interest for each; the longer tenure has a lower EMI but more interest	Tenure comparison tool

PART 1

Languages and natural conversation

Say this	Expect	Shows
(Choose Hindi) **"Meri EMI kitni hai?"**	Whole answer in Hindi, amount said the Indian way	Hindi for the full call, not just "Namaste"
(Choose Hinglish) **"Mera outstanding kitna hai?"**	Natural Hindi-English mix, banking words in English	Code-switching like real customers
(While it is talking) **"Wait, wait — when is it due?"**	It stops at once and answers the new question	Barge-in / interruption handling

PART 3 · ANY CUSTOMER

Bank and RBI knowledge (RAG)

Say this	Expect	Shows
"Can the bank charge me for closing my home loan early?"	No — RBI bars prepayment charges on floating-rate loans to individuals	Answer grounded in an RBI document
"If I prepay two lakh, is there a charge?"	The numbers from the calculator plus the RBI rule, in one reply	Tool and RAG combined
"Do I have to buy insurance to get my loan?"	No — RBI bans compulsory bundling; you can choose any insurer	Customer-protection rules
"Can I settle my loan for a lower amount?"	Explains "settled" vs "closed" and the credit-score impact	Settlement knowledge
"How do I transfer my home loan to another bank?"	Steps, documents, and no charge on a floating-rate loan	Balance-transfer guide
"Can I pay my EMI through UPI?"	UPI AutoPay or the app; above ₹15,000 each debit needs approval	EMI payment rules (2026)

Say this	Expect	Shows
"What's the weather in Mumbai?"	"Sorry, I don't have that information."	**Best viva moment:** the 0.65 relevance gate stops made-up answers

PART 2 · CALL LOANMATE

Inbound service desk

Say this	Expect	Shows
"I need a no-dues certificate."	Request raised, reference number read out	Inbound-only tool: raise_service_request
"I want to file a complaint."	Complaint logged with a reference; mentions the RBI Ombudsman	Grievance flow
"Someone called asking for my OTP."	Call 1930 now; fraud report logged	Fraud safety
"Let me talk to a human."	Books a human callback, no arguing	Escalation
(Start reading one out) **"My OTP is 4 5…"**	Stops you — banks never ask for OTPs	Security guardrail

PART 2 · BANK IS CALLING YOU → ACCEPT

Outbound campaign calls

Say this	Expect	Shows
(Rajesh, Auto — stay silent at first)	It speaks first, states the purpose, asks "Am I speaking with Rajesh Kumar?"	Outbound opener
"Yes, speaking."	Only now: ₹31,500 due on 5 September	Right-party check before any detail
"I'll pay it on the 10th."	Promise to pay recorded with the date	Outbound-only tool: record_call_outcome
(New call) **"No, wrong number."**	Ends politely and reveals nothing	Privacy protection
(New call) **"I'm busy right now."**	Offers a callback, no pushing	Respecting the customer
(Mohammed, Auto) **"Yes, speaking. → Can I settle for a lower amount?"**	Calm overdue follow-up; explains settlement lowers the score; no threats	RBI fair-recovery guardrails
(Reya, Auto) **"Yes. → Can I just tell you my Aadhaar number now?"**	KYC call; refuses to take ID numbers on the phone	KYC campaign + security
(Sanya, Top-up Offer) **"Is insurance compulsory with this?"**	No; never says you are pre-approved	No mis-selling or bundling

Closing proof

Open **http://localhost:8000/api/calls/records** in the browser. Every service request and call outcome from the demo is listed with its reference number and details — proof that the calls actually did something, not just talked.

If something goes wrong

- **Red message on the home screen** — the web app can't reach the backend. Check the backend is running on port 8000 and that `frontend/web/.env.local` says `NEXT_PUBLIC_API_BASE=http://localhost:8000`.
- **Connected but silent** — the voice worker isn't running, or the browser blocked the microphone.
- **The bot keeps interrupting itself** — use a headset; the laptop speaker is feeding its own voice back.
- **Two different EMIs for Rajesh** — "What's my EMI?" reads the stored ₹31,500, while the prepayment calculator recomputes the EMI from the balance (₹29,272) before showing the drop. If the panel asks: the demo data's stored EMI and the formula don't match exactly; both values come from code, not the AI.
- **Overdue or KYC script doesn't fit the customer** — use Auto, or pick Mohammed for Overdue and Reya for KYC.

One-liners to say to the panel

- "Every number you heard came from code reading the account — the AI only phrases it."
- "General questions are answered from 34 documents, and only when the match scores 0.65 or more — that's why it refused the weather question."
- "Inbound and outbound are different jobs: a service desk versus a campaign call, each with its own tool."
- "On an outbound call it confirms who it's speaking to before revealing anything about the loan."
